

THE LANCET

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: GBD 2016 SDG Collaborators. Measuring progress and projecting attainment on the basis of past trends of the health-related Sustainable Development Goals in 188 countries: an analysis from the Global Burden of Disease Study 2016. *Lancet* 2017; published online Sept 12. [http://dx.doi.org/10.1016/S0140-6736\(17\)32336-X](http://dx.doi.org/10.1016/S0140-6736(17)32336-X).

Supplementary results to Measuring progress and projecting attainment based on past trends of the health-related Sustainable Development Goals in 188 countries: an analysis from the Global Burden of Disease Study 2016

The supplementary results appendix offers additional figures and tables.

List of Supplementary Results: Figures and Tables

Supplementary Figure 1. Comparing the UHC index with the geometric mean of nine UHC tracer interventions in 2016, by country.

Supplementary Figure 2. Comparing the UHC index in 2000 and 2016, by country.

Supplementary Figure 3. Projected performance, based on past trends, on the health-related SDG index, MDG index, and non-MDG index, and 37 individual health-related indicators, by country, 2030.

Supplementary Figure 4. Absolute projected change in the health-related SDG index, MDG index, and non-MDG index, and 37 individual health-related indicators, by country from 2016 to 2030.

Supplementary Figure 5. Comparing attainment of defined health-related SDG indicator targets in 2016 and, based on past trends, projected to be attained in 2030, by country.

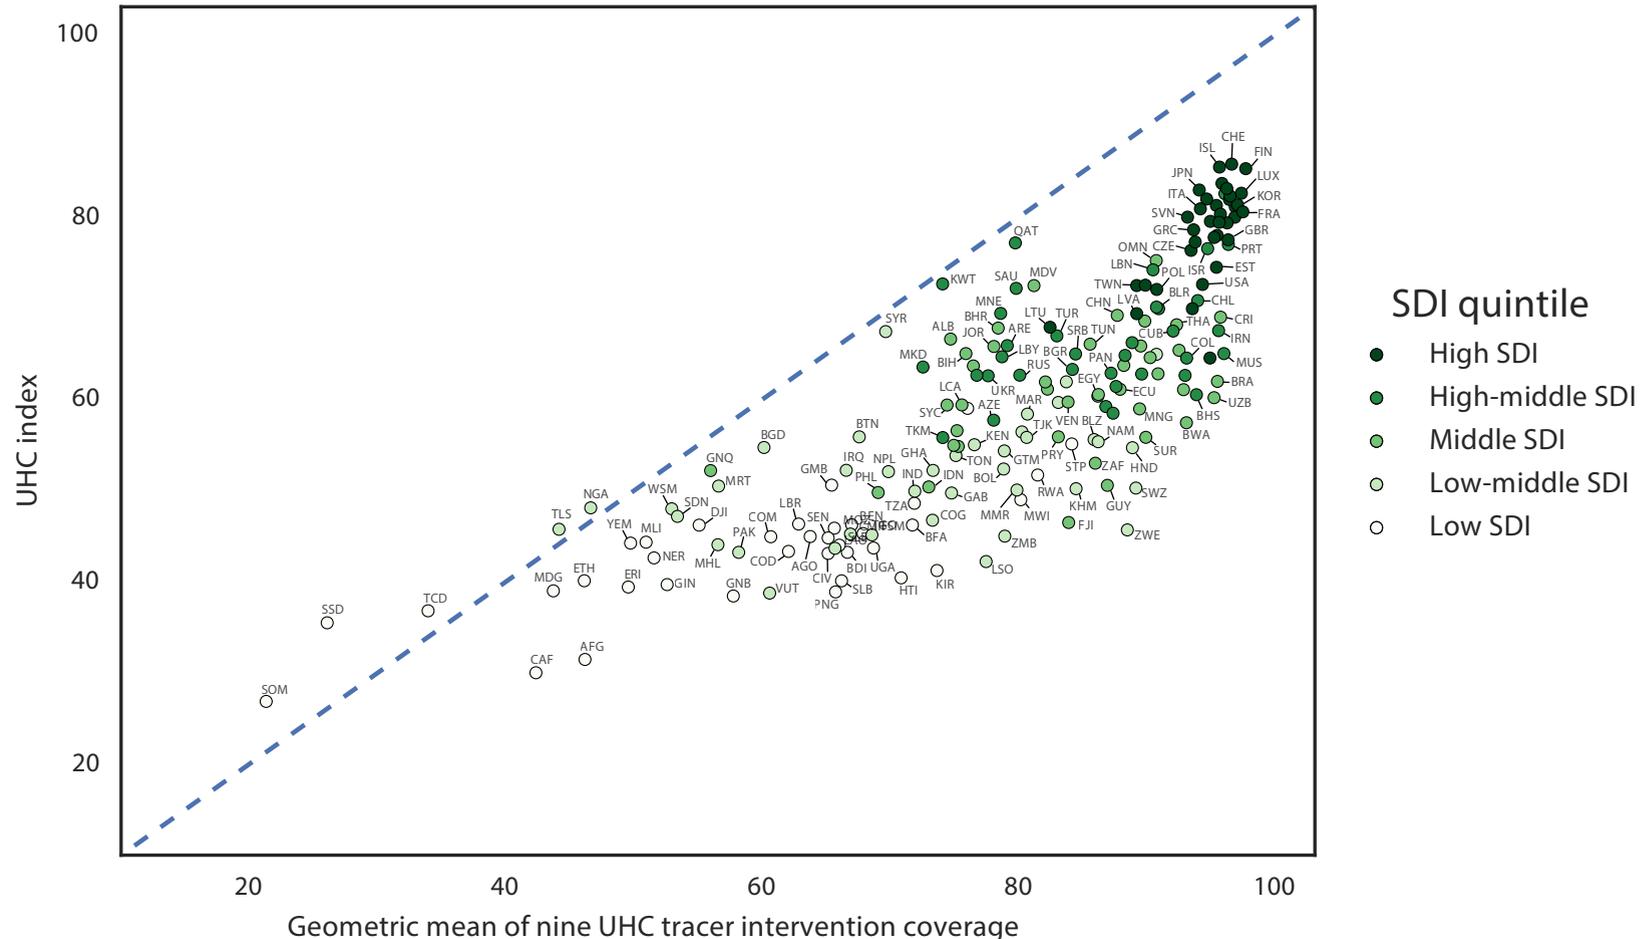

Supplementary Figure 6. Comparing attainment of defined and conservative health-related SDG indicator targets in 2016 and, based on past trends, projected to be attained in 2030, by country.

Supplementary Table 1. Health-related SDGs excluded in the present analysis, and measurement needs and strategy for future reporting, by SDG target.

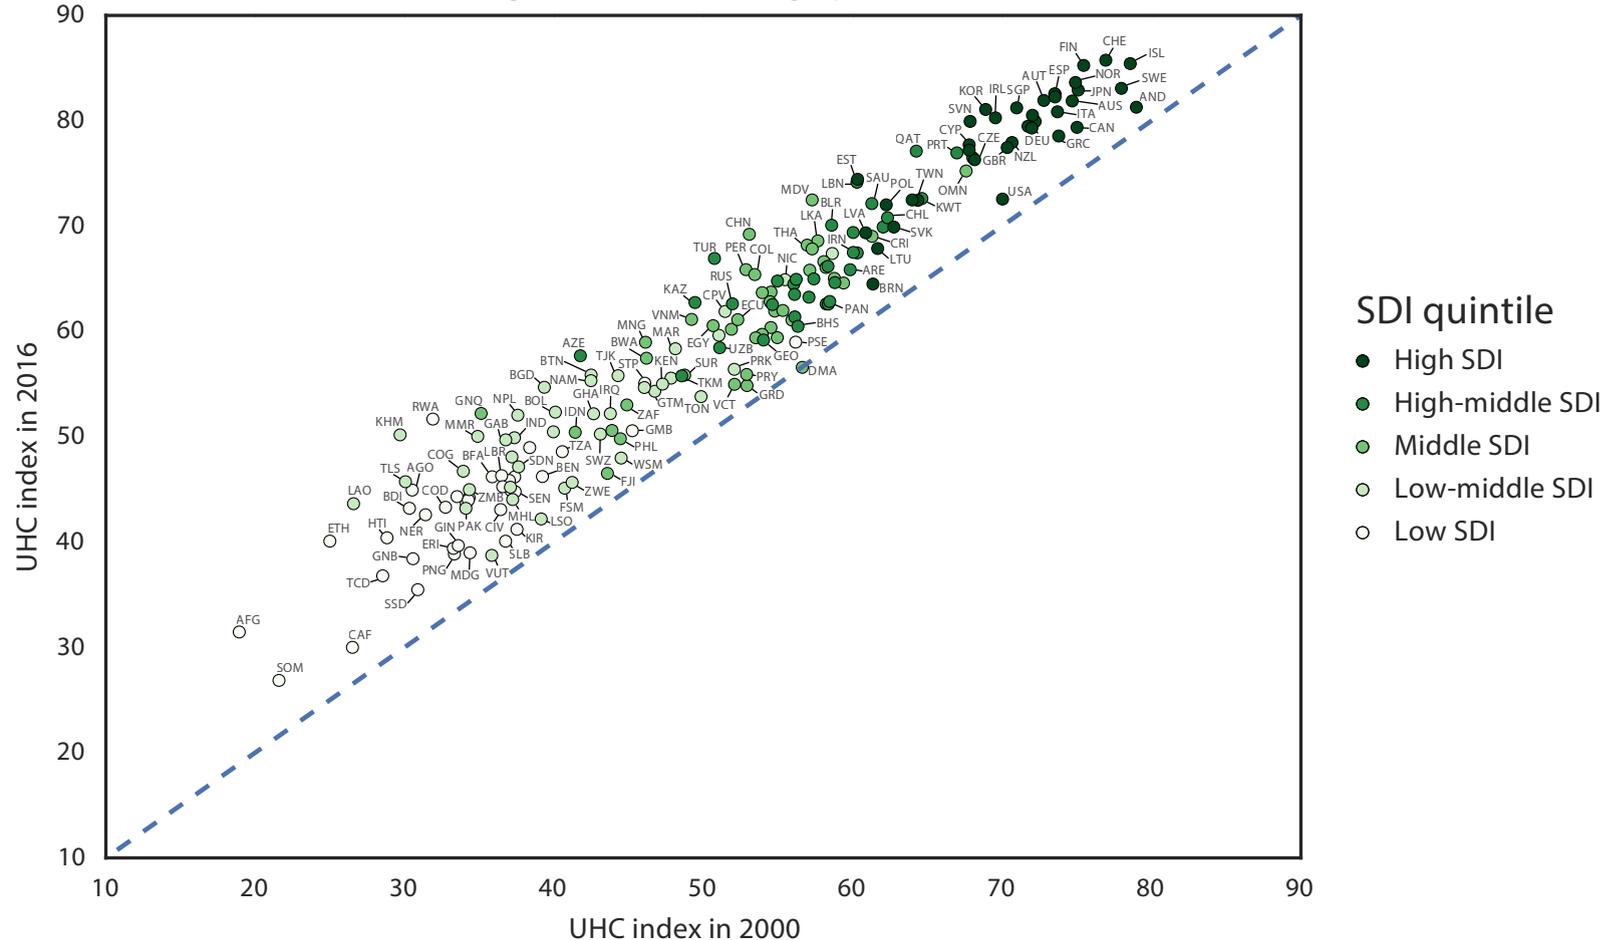

Supplementary Table 2. Scaled values for the health-related SDG index, MDG index, and non-MDG index, and 37 individual health-related indicators, by country, in 2000, 2015, 2016, and 2030.

Supplementary Table 3. Unscaled values for the 37 individual health-related indicators, by country, in 2000, 2015, 2016, and 2030.

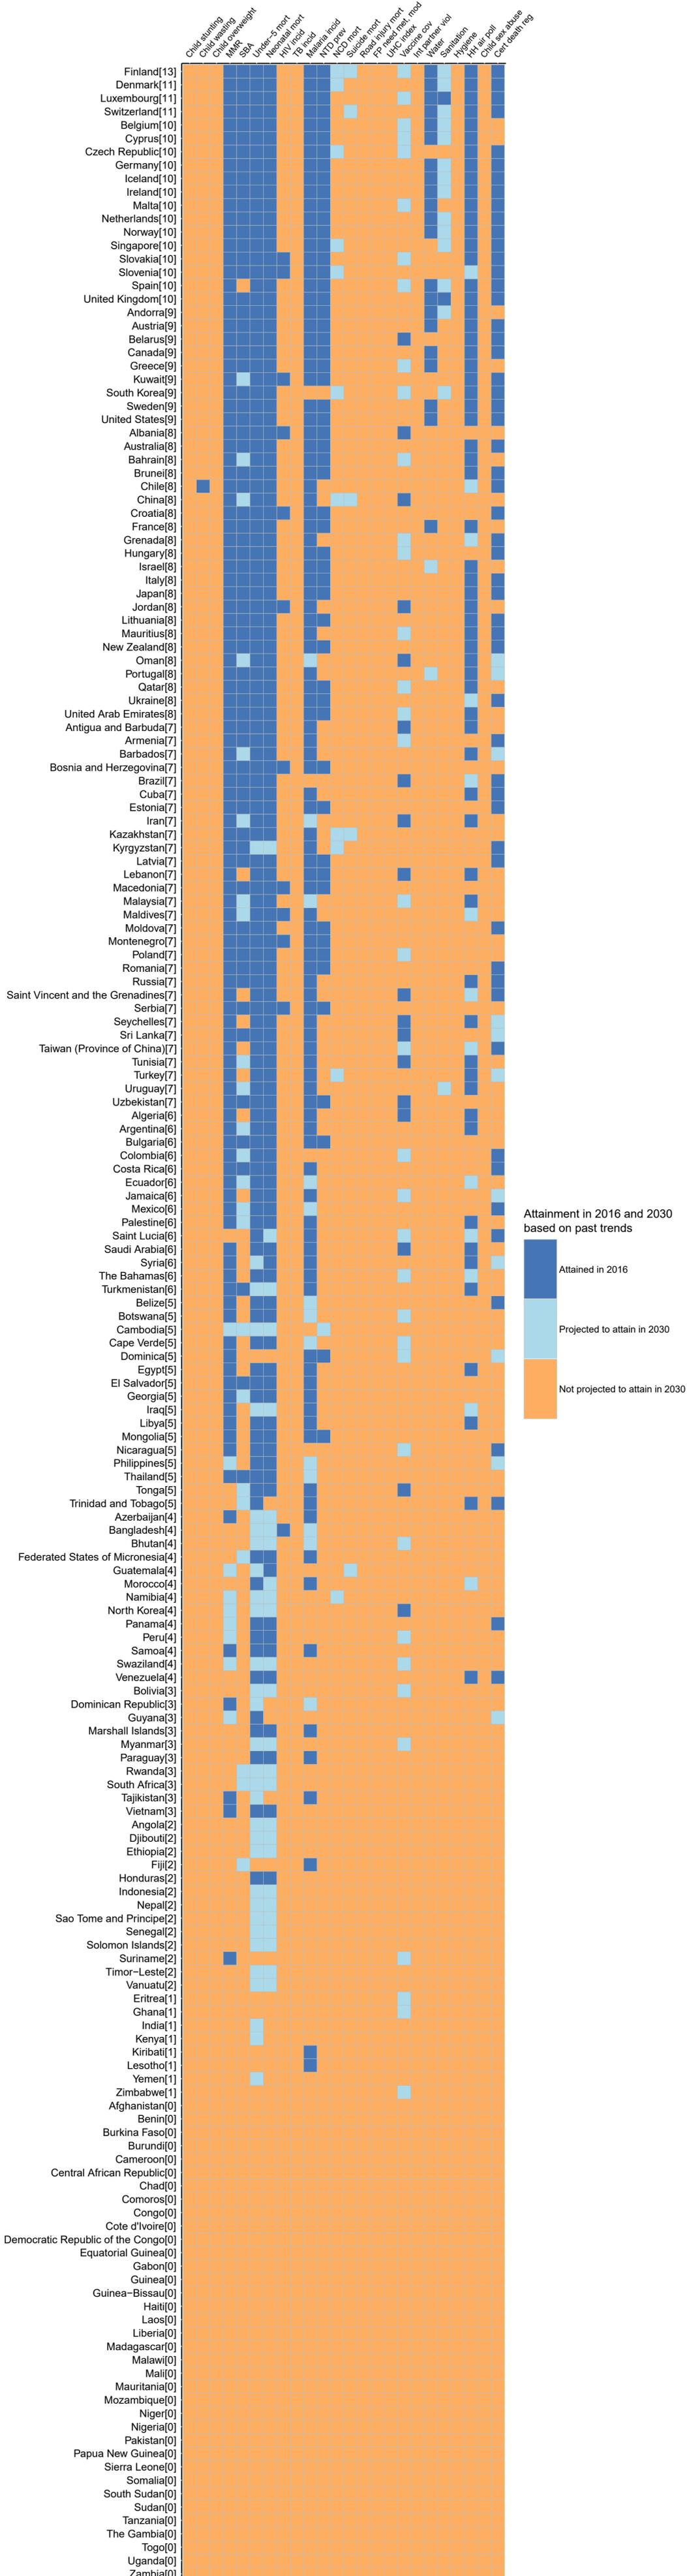

Supplementary Figure 1. Comparing the UHC index with the geometric mean of nine UHC tracer interventions in 2016, by country. The blue line shows the equivalence line, such that values that fall on this line are equivalent for both the UHC index and the geometric mean of nine UHC tracer interventions (coverage of three doses of the diphtheria-pertussis-tetanus vaccine, measles vaccine, and three doses of the oral polio vaccine or inactivated polio vaccine; met need for modern contraception; antenatal care coverage, 1 and 4 visits; skilled birth attendance; coverage; in-facility delivery rates; and coverage of antiretroviral therapy among people living with HIV). Countries are abbreviated according to the ISO3 code. UHC=universal health coverage. SDI=Socio-demographic Index. SDG=Sustainable Development Goal.

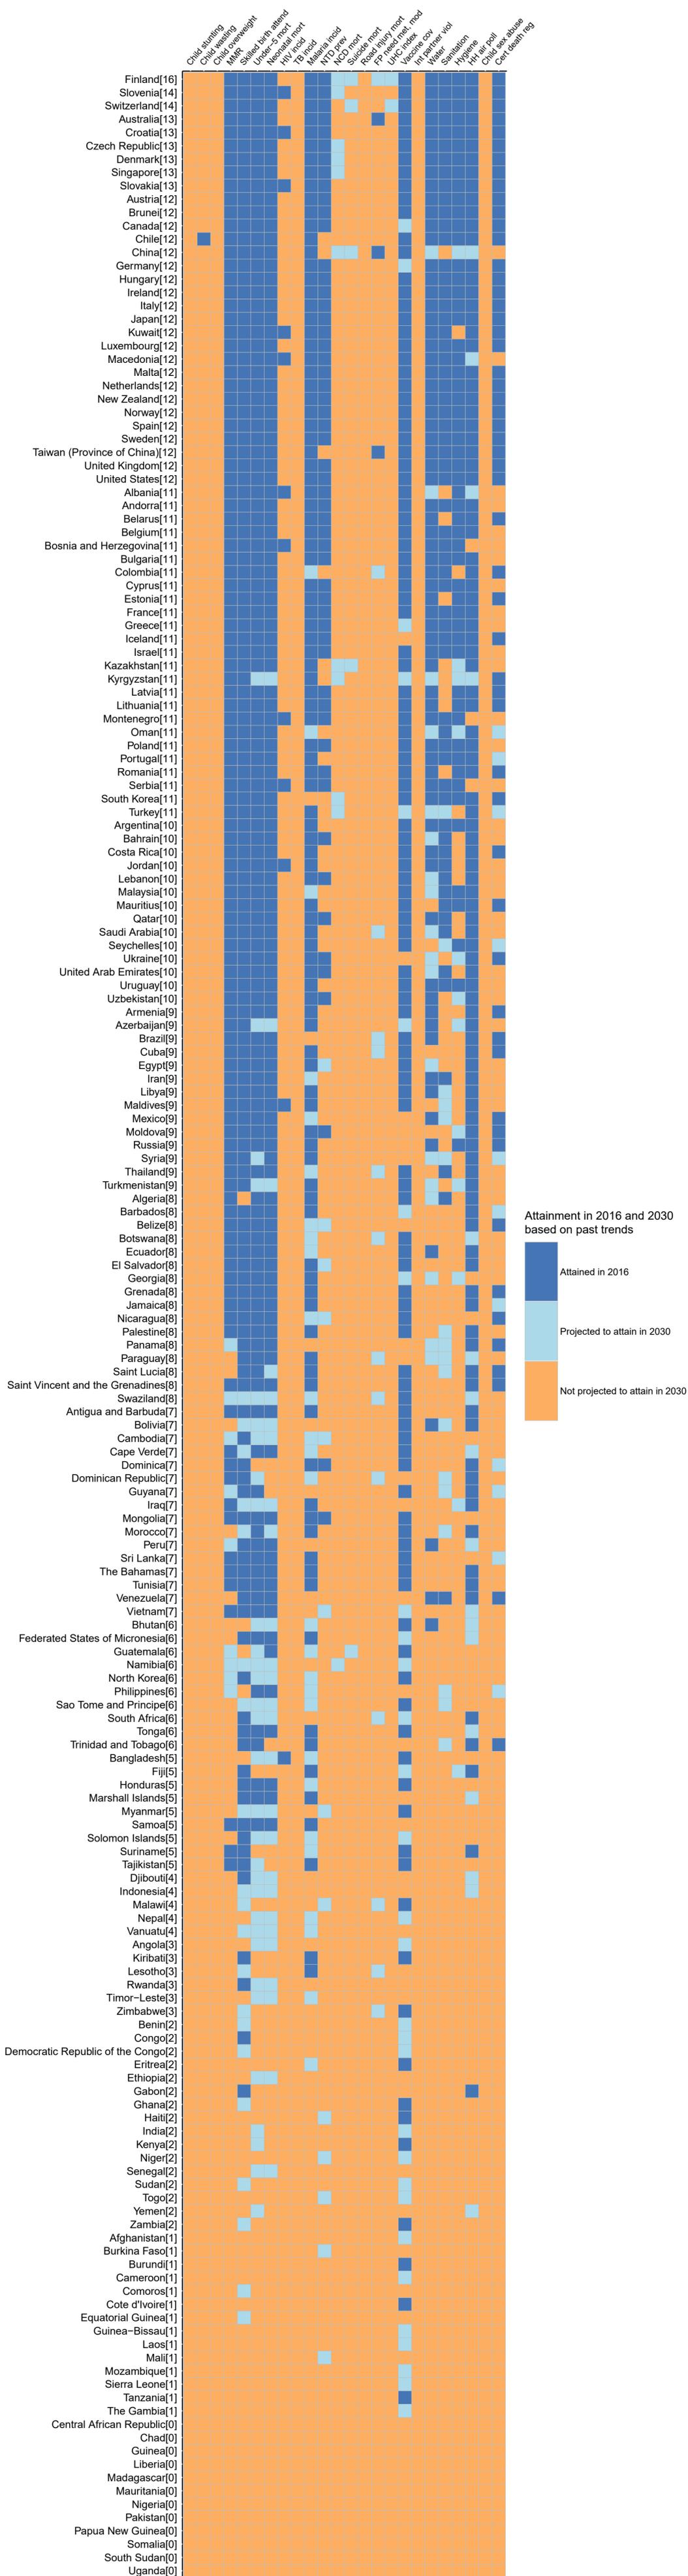

Supplementary Figure 2. Comparing the UHC index in 2000 and 2016, by country. The blue line shows the equivalence line, such that values that fall on this line are the same for the UHC index in 2000 and 2016. Countries are abbreviated according to the ISO3 code. UHC=universal health coverage. SDI=Socio-demographic Index.

Supplementary Figure 5. Comparing attainment of defined health-related SDG indicator targets in 2016 and, based on past trends, projected to be attained in 2030, by country. Countries are ranked by the number of SDG indicator targets they were projected to attain in 2030. All projections were based on past trends and rates of change observed from 1990 to 2016. Of the 37 health-related indicators measured in this study, 24 had defined targets linked to each indicator. SDG target 3.6 aims to reduce road injury mortality by 50% between 2015 and 2020, and thus projected attainment for this indicator is based on estimates from 2015 to 2020 rather than 2015 to 2030. Definitions of health-related SDG indicators and targets associated with them, as well as the specific target thresholds applied, are shown in table 1 in the main manuscript. SDG=Sustainable Development Goal. MMR=Maternal mortality ratio. SBA=Skilled birth attendance. Under-5 mort=Under-5 mortality. Neonatal mort=Neonatal mortality. HIV incid=HIV incidence. Tuberculosis incid=Tuberculosis incidence. Malaria incid=Malaria incidence. NTD prev=prevalence of 15 neglected tropical diseases. NCD mort=death rate due to a subset of non-communicable diseases (cardiovascular disease, cancer, diabetes, and chronic respiratory diseases). Suicide mort=mortality due to self-harm. Road injury mort=Mortality rate due to road injuries. FP need met, mod=met need for family planning with modern contraception methods. UHC index=Universal health coverage index. Vaccine cov=vaccine coverage of target populations based on national vaccine schedules. Int partner viol=Intimate partner violence. HH air poll=Household air pollution. Child sex abuse=Childhood sexual abuse. Cert death reg=Well-certified death registration.

Supplementary Figure 6. Comparing attainment of defined and conservative health-related SDG indicator targets in 2016 and, based on past trends, projected to be attained in 2030, by country. Conservative targets were defined as an 80% reduction for elimination targets from 2015 to 2030, and $\geq 90\%$ by 2030 for universal access or coverage. Targets with specific values to meet by 2030 or with specified relative reductions remained as originally defined, as found in table 1 in the main manuscript. Countries are ranked by the number of SDG indicator targets they were projected to attain in 2030. All projections were based on past trends and rates of change observed from 1990 to 2016. Of the 37 health-related indicators measured in this study, 24 had defined targets linked to each indicator. SDG target 3.6 aims to reduce road injury mortality by 50% between 2015 and 2020, and thus projected attainment for this indicator is based on estimates from 2015 to 2020 rather than the 2015 to 2030. Definitions of health-related SDG indicators and targets associated with them are shown in table 1 in the main manuscript. SDG=Sustainable Development Goal. MMR=Maternal mortality ratio. SBA=Skilled birth attendance. Under-5 mort=Under-5 mortality. Neonatal mort=Neonatal mortality. HIV incid=HIV incidence. Tuberculosis incid=Tuberculosis incidence. Malaria incid=Malaria incidence. NTD prev=prevalence of 15 neglected tropical diseases. NCD mort=death rate due to a subset of non-communicable diseases (cardiovascular disease, cancer, diabetes, and chronic respiratory diseases). Suicide mort=mortality due to self-harm. Road injury mort=Mortality rate due to road injuries. FP need met, mod=met need for family planning with modern contraception methods. UHC index=Universal health coverage index. Vaccine cov=vaccine coverage of target populations based on national vaccine schedules. Int partner viol=Intimate partner violence. HH air poll=Household air pollution. Child sex abuse=Childhood sexual abuse. Cert death reg=Well-certified death registration.

Supplementary Table 1. Health-related SDGs excluded in the present analysis, and measurement needs and strategy for future reporting, by SDG target. Definitions and descriptions of health-related SDG indicators beyond the specific indicators originate from the IAEG-SDGs compilation of metadata for each SDG (as provided by each indicator's custodial agency). DAH=development assistance for health. DHS=Demographic and Health Survey. GBD=Global Burden of Disease. IAEG-SDGs=Inter-agency and Expert Group on SDG Indicators. IHR=International Health Regulations. ISIC=International Standard Industrial Classification. JEE=Joint External Evaluation. NCD=non-communicable diseases. SDG=Sustainable Development Goal. TRIPS=Agreement on Trade-Related Aspects of Intellectual Property Rights. UHC=universal health coverage. UN=United Nations. WHO=World Health Organization.

SDG target	Health-related SDG indicator	Measurement needs and strategy
Goal 3: Ensure healthy lives and promote well-being for all at all ages.		
Target 3.5: Strengthen the prevention and treatment of substance abuse, including narcotic drug abuse and harmful use of alcohol.	Indicator 3.5.1: Coverage of treatment interventions (pharmacological, psychosocial, and rehabilitation and aftercare services) for substance use disorders.	Prevalence of specific substance use disorders (opioid use disorders, cocaine use disorders, amphetamine use disorders, and cannabis use disorders), as well as alcohol use disorders, are presently estimated as part of the Global Burden of Disease (GBD) study. Systematic reviews on coverage of specific interventions (eg, opioid substitution therapy) are currently in progress as part of the GBD.
Target 3.8: Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality, and affordable essential medicines and vaccines for all	Indicator 3.8.2: Proportion of population with large household expenditures on health as a share of total household expenditure or income.	Comprehensive and comparable datasets on household expenditures on health as a fraction of total household expenditure or income are not currently available across all locations and over time. Appropriately measuring what constitutes total household expenditure or income while accounting for non-monetary household types of wealth which contribute to overall household income will be necessary for populations on the lower end of the sociodemographic spectrum.
Target 3.b: Support the research and development of vaccines and medicines for the communicable and non-communicable diseases that primarily affect developing countries, provide access to affordable essential medicines and vaccines, in accordance with the Doha Declaration on the TRIPS Agreement and Public Health, which affirms the right of developing countries to use to the full the provisions in the Agreement on Trade-Related Aspects of Intellectual Property Rights regarding flexibilities to protect public health, and, in particular, provide access to medicines for all.	Indicator 3.b.2: Total net official development assistance to the medical research and basic health sectors.	Development assistance for health (DAH) is currently assessed within a comprehensive, comparable analytic framework by source, channel, recipient country, and health focus area from 1990 to 2016; however, funding specifically for medical research (eg, research and development of vaccines and medicines, as described in Target 3.b), is not systematically available across source and recipient countries. In addition, the appropriate assessment of country-level performance remains unclear (eg, whether countries that receive high levels of DAH for medical research are equivalent, in terms of indicator performance, to countries that disburse high levels of DAH for medical research).
Target 3.b (same as above)	Indicator 3.b.3: Proportion of health facilities that have a core set of relevant essential medicines available and affordable on a sustainable basis.	Across all locations and over time, comparable data on the stocking and stock-out rates of essential medicines for all facility types (hospitals, primary care facilities, pharmacies, and other health care outlets) and facility ownership (public, private, informal) are not currently available. In the absence of robust measures of stock-outs in both the public and private sectors across countries and over time, the measurement strategy for producing comparable results for this indicator is unclear. Further, what should constitute "a core set of relevant essential medicines" is likely to vary by location based on its epidemiological profile, and thus work is needed to more precisely define what these core sets of relevant essential medicines should be given known disease burden, risk factor profiles, and health risks across countries. Last, the proposed indicator stipulates measurement of not simply access to a core set of essential medicines but also access to affordable medicines. No comprehensive and comparable datasets on the status of essential medicine affordability, in addition to their stocks, presently exist.
Target 3.c: Substantially increase health financing and the recruitment, development, training and retention of the health workforce in developing countries, especially in least developed countries and small island developing States.	Indicator 3.c.1: Health worker density and distribution, as measured by number of health workers per 1,000 population by cadre. Cadres include generalist medical practitioners, specialist medical practitioners (surgeons, anaesthetists, obstetricians, emergency medicine specialists, cardiologists, paediatricians, psychiatrists, ophthalmologists, gynaecologists, etc.), nursing and midwifery professionals, traditional and complementary medicine professionals, among others.	A systematic analysis of population census data and Labour Force Surveys and censuses is presently under way as part of the GBD study.

SDG target	Health-related SDG indicator	Measurement needs and strategy
Goal 3: Ensure healthy lives and promote well-being for all at all ages.		
Target 3.d: Strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks.	Indicator 3.d.1: International Health Regulations (IHR) capacity and health emergency preparedness. The WHO-recommended measure is the percentage of 13 core capacities that have been attained at a specific time (IHR core capacity index). The 13 core capacities are (1) national legislation, policy, and financing; (2) coordination and national focal point communications; (3) surveillance; (4) response; (5) preparedness; (6) risk communication; (7) human resources; (8) laboratory; (9) points of entry; (10) zoonotic events; (11) food safety; (12) chemical events; and (13) radionuclear emergencies.	Comprehensive and comparable data for all components of the IHR core capacity index, for all geographies and over time, are not currently openly available. Self-evaluations have been undertaken by some member states, with a subset followed up with independent assessments via the Joint External Evaluation process (JEEs). To date 23 countries have completed this process and made reports fully available out of a total of 43 completed JEEs. An additional 30 countries are scheduled for assessment by end of 2018. As these data become more openly available it may be possible to model regional and temporal trends to estimate outstanding countries, but will likely necessitate creating bespoke covariates relating to policy status and types of surveillance system that are not currently reported in the GBD study.
Goal 5. Achieve gender equality and empower all women and girls		
Target 5.2: Eliminate all forms of violence against all women and girls in the public and private spheres, including trafficking and sexual and other types of exploitation.	Indicator 5.2.2: Proportion of women and girls aged 15 years and older subjected to sexual violence by persons other than an intimate partner in the previous 12 months, by age and place of occurrence. UN Women defines sexual violence to include acts of abusive sexual contact, forced engagement in sexual acts, attempted or completed sexual acts without consent, incest, sexual harassment, etc. It is noted that survey data on sexual violence against women by non-partners is often limited to information on whether a woman was forced into sexual intercourse when she did not want to and whether a woman experienced an attempt at being forced to perform a sexual act or sexual intercourse against her will.	Prevalence of intimate partner violence among women and girls aged 15 and older is currently estimated as part of the GBD study. An updated systematic review of the literature, data re-extraction, and analysis to specifically quantify prevalence of sexual violence (separately and/or in addition to physical violence) and by persons other than an intimate partner is currently ongoing as part of the GBD. Data availability on the latter, sexual violence by persons other than intimate partners, is very minimal in many parts of the world (eg, sub-Saharan Africa). Currently identified data sources are limited to higher-income countries (ie, Western Europe and the USA).
Target 5.6: Ensure universal access to sexual and reproductive health and reproductive rights as agreed in accordance with the Programme of Action of the International Conference on Population and Development and the Beijing Platform for Action and the outcome documents of their review conferences.	Indicator 5.6.1: Proportion of women aged 15-49 years who make their own informed decisions regarding sexual relations, contraceptive use, and reproductive health care.	The proportion of women who make their own informed decisions regarding all three dimensions of this indicator – sexual relations, contraceptive use, and reproductive health care – are included in the Demographic and Health Survey (DHS) series. Data availability for non-DHS countries is unclear. The feasibility of measuring this indicator as part of future iterations of the GBD study is presently under review.
	Indicator 5.6.2: Number of countries with laws and regulations that guarantee full and equal access to women and men aged 15 years and older to sexual and reproductive health care, information and education.	Across all locations and over time, comprehensive and comparable data documenting the status of laws and regulations regarding access to sexual and reproductive healthcare, information, and education currently do not exist. Compiling the past and current status of such laws and regulations might be possible; however, systematically assessing their depth or intensity, enforcement, and effectiveness in guaranteeing access to reproductive health care, information, and education may be challenging across locations and over time.
Goal 6: Ensure availability and sustainable management of water and sanitation for all.		
Target 6.3: By 2030, improve water quality by reducing pollution, eliminating dumping and minimizing release of hazardous chemicals and materials, halving the proportion of untreated wastewater and substantially increasing recycling and safe reuse globally.	Indicator 6.3.1: Proportion of wastewater safely treated. UN Water defines this indicator as the proportion of wastewater generated by both households (sewage and faecal sludge), as well as economic activities (based on International Standard Industrial Classification [ISIC] categories) safely treated compared to total wastewater generated both through households and economic activities. While the definition conceptually includes wastewater generated from all economic activities, monitoring will focus on wastewater generated from hazardous industries (as defined by relevant ISIC categories).	Across all locations and over time, comprehensive and comparable data containing information on total wastewater, as generated by both households and non-household entities (however they are to be defined), and wastewater treatment status do not currently exist. UN Water suggests there will be sufficient data to generate estimates of global and regional levels of safely treated wastewater by 2018; however, in the absence of more country-level data, it is difficult to determine the representativeness of such global and regional estimates.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels		
Target 16.1: Significantly reduce all forms of violence and related death rates everywhere.	Indicator 16.1.4: Proportion of people that feel safe walking alone around the area they live.	The Gallup World Poll, which is currently active in more than 140 countries, includes questions about reported safety while walking alone near one's residence. A systematic analysis of these data are planned as part of GBD 2017.

SDG target	Health-related SDG indicator	Measurement needs and strategy
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels		
Target 16.9 By 2030, provide legal identity for all, including birth registration.	Indicator 16.9.1: Proportion of children under 5 years of age whose births have been registered with a civil authority, by age. <i>(Considered a duplicate of SDG indicator 17.19.2b)</i>	Currently, birth registration data reported to WHO do not fully cover all locations or years under analysis, and supplementary data sources, such as household survey data, are often required to estimate births and birth rates outside of high-income regions. Substantive data collation efforts would be required for birth registration by location and over time.
Goal 17: Strengthen the means of implementation and revitalize the global partnership for sustainable development.		
Target 17.19: By 2030, build on existing initiatives to develop measurements of progress on sustainable development that complement gross domestic product, and support statistical capacity-building in developing countries.	Indicator 17.19.2a: Proportion of countries that have conducted at least one population and housing census in the last 10 years.	A comprehensive assesment of the availability and timing of population and housing censuses across all locations is planned as part of future iterations of the GBD study.
Target 17.19 (as above)	Indicator 17.19.2b: Proportion of countries that have achieved 100 percent birth registration. <i>(Considered a duplicate of SDG indicator 16.9.1)</i>	Currently, birth registration data reported to WHO do not fully cover all locations or years under analysis, and supplementary data sources, such as household survey data, are often required to estimate births and birth rates outside of high-income regions. Substantive data collation efforts would be required for birth registration by location and over time.

Supplementary Table 2. Scaled values for the health-related SDG index, MDG index, and non-MDG index, and 37 individual health-related indicators, by country, in 2000, 2015, 2016, and 2030. Projected estimates for 2030 were produced based on past trends and rates of change observed from 1990 to 2016. Indices and individual indicators are reported on a scale of 0 to 100, with 0 representing the worst levels from 1990 to 2030 and 100 reflecting the best during that time. SDG=Sustainable Development Goal. MDG=Millennium Development Goal.

Location	SDG Index: Geometric mean of all health-related SDG indicators (scale of 0 to 100)				MDG Index: Geometric mean of all health-related SDG indicators with corresponding MDG indicators (scale of 0 to 100)				Non-MDG Index: Geometric mean of all health-related indicators without corresponding MDG indicators (scale of 0 to 100)				Indicator 1.5.1: Death rate due to exposure to forces of nature (per 100,000 population)
